Eutrophication worksheet tes

part of a series of DRAW IT activities. The class is divided into two halves: one half gets the scheme and must write a comment, which each stage in the diagram shows; The other half gets a written comment about the process and must draw a diagram representing each stage. The two halves of the class can then be paired to discuss the eutrophication process before asking students for a summary during a class discussion or on the main class board. An easy way to quickly learn about a complex process for students. Keywords: Eutrophication, drawing, writing, pollution, algae, sunlight, photosynthesis, decomposition, decay, oxygen, breathing, death, fish, organisms, waterRead moreSaid problem
